

An Important Sustainable Projects Information - Species Research Library Project and Media Room Invitation - Free to Share

Here are some very important information for you all. Uniting forces and resources for a special Critically Endangered Species (CES) research and protection program.

It's about Greening Camps, research, innovative developments, global goals and solutions. Greening Deserts projects like the greening and research camps will be platforms for Cleantech, climate protection, nature conservation, culture, education, environmental and species protection, Greentech and science. All camps can have a library, lounge and media room. Perfect to exchange with education, book and media branch, to experiment with creative designs, green building and sustainable architecture. Bigger camps will get an Energy Storage Park and even could be expanded to a kind of campus or science park. We have not much time to establish hundreds of camps, greenhouses and new special areas (on land and at sea!) for the most endangered species and keystone species of this world. It is similar as with other cascade effects like the permafrost and wetlands problem. If more keystone species like the bees extinct, even relative unknown or small ones, it will accelerate the mass extinction and reach 'tipping points' in relation to the critical biodiversity loss is ongoing. The only way is to focus on this most important issue of the world and put it on the first place of all agendas, concentrate on the most endangered known species and find the forgotten and unknown keystone species with best of search algorithms, networks and intelligent systems like AI, Deep Learning, cloud and crowdworking, archive

management and intelligent library systems - powered by best of computing environments, so like special supercomputers. It has really more priority as using so much computing resources for astrological calculations, brain simulations or other mega applications which doing all the same or nearly simliar kind of tasks or work. Not to mention all the energy wasting computers, servers and smartphones in idle mode or used for time wasting tasks like certain films, series or war games.

Think for example about wasting hundred of billions each year for space exploration and missions like for Mars, countless new rockets and satellites for the same tasks. It was all senseless if the world goes down in near future. Many of them doing nearly the same work, we the humanity not really need, it's similar like other overproducing industries. It is really a problem all that waste in space! We need a more sustainable aerospace industry and better regulations. During the years we worked out best of solutions together with countless international institutions and organisations, especially because of real sustainable working solutions, on demand production and more efficient production on more realistic demand analyses, same with optimizing sustainable supply chains and markets.

Every day counts to protect the most endangered species with all means and to bring this aspect, this task and the topic to the top on all relevant agendas - on all possible channels, daily and internationally. Of course, corresponding protected areas with the highest concentrations of life forms in all possible regions and climate zones also have priority. The 'overprotected' species and programs, resources, energies, .. in this context.. they should also concentrate more on these aspects, because to protect so much elephants, polar bears, giraffes, pandas, etc. who are relative save and every day important key species dying out ! It is a similar problem as with the neglected tipping points and the wrong prioritization of politics and economy - see United Nations Climate Change Conference. Only if the problems mentioned are resolved promptly the cascade effects can be reduced and possibly over decades of massive efforts stopped, and new disasters in this regard prevented. Then there may be a real chance to prevent extinction (also of humanity). Every action and every person counts in this regard, whether large or small, known or unknown. We maybe have approx two years to solve these problems and ten years to plant a trillion trees worldwide.

Further information and good news:

The Greening Camp plants like desert bamboo and hemp will improve the soils, underground water and waters in general. Drylands and wastelands can be turned into fertile lands easily with Greening Deserts technics and technologies were developed during the last three years. Hemp improves the soils in just a few years, after this other soil improving plants, environmental friendly crops and trees can be planted. Hemp will be a side product of the forestation or greening processes, it can be delivered to hemp product producers like the hemp paper branch and hemp wood industry. All would win at the end - the poor people or regions, the degraded lands or soils, the forestry, paper and wood industry - even big wood paper consumers like the book, newspaper and

packaging industry. Hemp and rice straw paper books could reform the book and paper branch in many ways. If you want to know more about, don't hesitate to contact me. I'm expert in these fields and markets since 2003. The worldwide cleaning (air, water, etc.) and greening process can accelerate the global peace building process significantly.

You and colleagues are also welcome to join the Greening Deserts campaigns and initiatives like the Trillion Trees Initiative to reduce negative climate changes, deforestation, droughts, desertification, land degradation, floods and global warming on a large scale - especially in human-made deserts, drylands and wastelands. The initiative was founded in 2018. Different nations, organisations, personalities and institutions have already expressed their interest.

We launched another great initiative to reduce plastic waste in worldwide waters and it will open a complete new sustainable market. It's called Plastic Fishery, more news will come soon.

What do you think about? If it is also interesting for you, colleagues or company we can exchange more. Diverse collaborations, cooperations, partnerships and sponsorships are possible.

Climate protection, nature conservation and environmental protection is also species protection. Please do not ignore and forward if you can, it affects us all.

Feel free to send also some information about your work or organisation. I'm always open for good advises, ideas or suggestions.

Constructive feedback and active support is of course welcome, too. Thank you for reading and let's have a good time. You can read more on the [Greening Deserts](#) project pages and connected community network.

Oliver G. Caplikas / Project Developer / Independent Supervisor I. Advisor
Researcher

PS: Childrens Rights are Human Rights. Clean air, soils, waters and healthy environments are Human Rights, too. We need more environmental awareness and sustainability, sustainable living and sustainable working, in all fields or areas. We need to create a world of understanding, acceptance, respect, tolerance, compassion and consciousness.

Awareness programmes, communications letters and statements were initiated and shared with thousands of worldwide governments, institutions and organisations in autumn and winter 2019.
